

Career Objective

With over three years of comprehensive experience in DevSecOps, middleware, and backend development, I aim to leverage my expertise in building secure, scalable systems. I have successfully developed web applications using .NET, architected robust databases, and created microservices APIs with Java Spring Boot and Python Flask. My work with tools like Redis, Kafka, OpenShift, and Docker has driven efficient and resilient solutions. As a DevSecOps engineer, I excel in automating complex pipelines with Jenkins and Jira, ensuring seamless and secure deployments in virtual environments. Committed to innovation and continuous learning, I strive to deliver efficient, well-documented code that enhances security and operational efficiency in dynamic organizations.

Skills

- DevSecOps Practices: Advanced expertise in designing and automating complex CI/CD pipelines, integrating security best practices, and managing sophisticated configurations with Jenkins and Jira for enterprise-level applications.
- Programming Languages: Proficient in Java, Python, and .NET, with a deep understanding of advanced backend and middleware development concepts, including multithreading and memory optimization.
- Microservices Architecture: Extensive experience in designing and implementing scalable and resilient microservices APIs using Java Spring Boot and Python Flask, focusing on performance and reliability.
- Containerization and Virtualization: Expert in Docker for containerization, including multi-stage builds, and OpenShift for orchestration and scaling, with experience in deploying large-scale, distributed systems.
- Database Management: In-depth knowledge of relational and NoSQL database design, optimization, and management, with hands-on experience in complex query tuning and data modeling.

Work Experience

Bank Negara Indonesia (BNI) — DevSecOps Engineer (Febuary 2024 - Present)

- Build Automation: Led initiatives to **automate** and optimize backend and frontend builds, **reducing deployment** time and improving build reliability.
- File Management: Implemented secure file transfer protocols and **automated backup** solutions, enhancing data integrity and accessibility across distributed systems.
- Notification Systems: Designed and implemented robust email **notification systems** for real-time alerts and process statuses, improving operational communication and response times.
- Containerization: Transformed legacy applications into **containerized** solutions with **Docker**, enabling consistent deployment and easier scalability across diverse environments.
- Additional Responsibilities: Conducted **security** audits and risk assessments, significantly improving system security posture and compliance.

Bank Negara Indonesia (BNI) — Backend Developer (January 2022 - January 2024)

- Technical Expertise: Developed high-performance applications in **Java Spring Boot** and **Python**, utilizing advanced design patterns and frameworks for robust microservices architecture.
- Deployment Experience: Led deployments on **OpenShift** and **OpenFaaS**, implementing continuous deployment strategies that reduced downtime and improved application delivery.
- Code Quality: Championed code quality through rigorous testing and the implementation of tools like **SonarQube**, resulting in cleaner, more maintainable codebases and reduced technical debt.

PT Wisesa Consulting Indonesia — Software Developer (January 2021 - July 2021)

As a developer with expertise in **VB.NET** and **SQL Server**, my career objective is to utilize my technical skills and knowledge to create high-quality, user-friendly web applications that meet the needs of businesses and organizations

Education

Tarumanagara University — Bachelor of Information Technology (2018 - 2022)

3.64/4 GPA
Member of the Student Representative Council (DPM).

Created **automated trading systems for cryptocurrencies** using advanced technical analysis techniques, including **LSTM** for price prediction, candlestick pattern recognition, and pivot point analysis to make informed trading decisions. Designed the trading robot using the Tkinter and Flask frameworks in Python. Achieved **First Place** in SQL and C++ Competitions and **Second Place** in Business-Based Technology Competition at Tarumanagara University.
